Savvy Caregiver is an evidence-based program designed to equip caregivers with the tools & strategies they need to provide effective care for clients and preserve their own well-being. This 6 hour course will help you apply principles and strategies for dealing with the cognitive, behavioral, emotional and performance losses that dementia causes in persons with the disease. After completing this train the trainer course, you will be able to offer the Savvy Caregiver program at your organization.

Course objectives:

- To learn the methods for conducting a 6 week class that teaches caregivers how to care for a person with a dementing illness.
- To understand the structure of the Savvy Caregiver program and appreciate how the talks, exercises, readings and home assignments integrate to support the caregiver learning objectives of the program.
- Be knowledgeable about and able to use the program's supporting materials (manuals, slides, DVD, and handouts).

This course is designed for social workers, nurses, case managers, and geriatric specialists, health care providers in skilled nursing, acute care hospitals, home health aides, health educators, and clinical administrators.
