

Aphasia Research Study

The purpose of this research study is to assist with post-stroke aphasia rehabilitation through the development of brain images. We are looking for volunteers who are willing to get an MRI and complete some tests. Volunteers will be expected to make at least 2 visits over several weeks to complete the study.

- Do you have aphasia caused by stroke?
- Are you between the ages of 20-80?
- Are you right handed?
- If so, you may be eligible to participate.
